

FOR IMMEDIATE RELEASE

Auralex® Introduces Synergy™ GreenScreen™ Acoustical Absorption Panels

Indianapolis, IN, USA, January 25, 2024

Auralex Acoustics, Inc., the world's leading brand of acoustical treatments for over 40 years, is pleased to announce their new **Synergy™ GreenScreen™** Acoustical Absorption Panels. The **Synergy™ GreenScreen™** panels are another product released in the **Auralex Synergy™** product family. Synergy panels are an innovative combination of Auralex **EcoTech™** and Auralex **Studiofoam®** and deliver excellent acoustical absorption in an economical design.

Synergy™ GreenScreen™ panels are intended for use in video, broadcast, and podcast environments, as well as on-camera streaming, gaming and reaction channels, where a green screen background is needed with the added benefit of acoustical absorption. The 22" x 22" x 1.3" thick panels help eliminate annoying acoustic reflections, flutter-echo, and room noise and provide a usable, easy-to-install green screen that can be placed behind talent within any space.

According to **Auralex Acoustics Founder & President Eric Smith**, "The **Synergy™ GreenScreen™** is inspired by our customers' feedback - they want an acoustically-driven product that could also be used as a Chroma Key green screen backdrop. These new high-performance acoustical panels are designed for video professionals, podcast producers, and YouTube content creators and provide the perfect environment for recording clear audio recordings free from unwanted noise."

- Available in (6) Pack of Panels or (1) Single Panel
