

Auralex® | Fusion™ Panel

ACOUSTICAL TUNING FACEPLATES

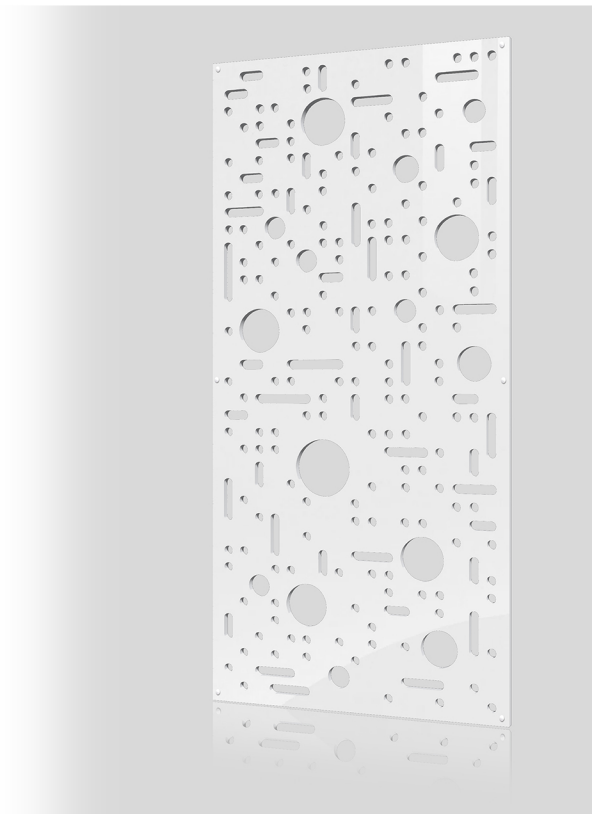

The Auralex® Acoustics Fusion™ line of acoustical tuning faceplates are meticulously crafted to enhance both visual appeal and the diffusive properties of your absorption panels. Featuring a unique blend of aesthetics and functionality, Fusion is sure to elevate your listening environment.

Fusion is defined as the merging of different elements into a union. A fusion of absorption and diffusion acoustical products combines the benefits of both acoustical treatment methods to create a comprehensive solution for managing sound within a space.

- **Hybrid Solution:** Combine absorption materials and diffusion patterns within the same panel. This integration allows for a more versatile solution that can address both reflection and diffusion simultaneously.
- **Tuned Design:** Engineered to provide specific absorption and diffusion characteristics.
- **Aesthetic Integration:** Enhance the visual appeal of your acoustical treatment to seamlessly blend into various architectural and interior design styles.
- **Modularity and Placement:** Flexible installation, allowing users to strategically place Fusion24 faceplates to achieve the desired balance of absorption and diffusion based on the room's specific acoustical requirements.
- **Broad Frequency Response:** Addresses a broad range of frequencies, ensuring effective control across the audible spectrum.

Available in 21.75" x 45.75" faceplates (Ash and Pear - 0.25" thick, White and Black - 0.080" thick) for existing wall panels or ordered with new Auralex ProPanel™ Wall Panels.

Easy Installation

Fusion Acoustical Tuning Faceplates come with mounting pins for easy installation. Simply lift Fusion to the face of your absorption panel, align so that the plate is centered, and push the mounting pins through the pre-drilled holes - firmly securing the plate to your absorption panel.

The provided mounting pins are finished to match the Fusion plate which you ordered: Ash, Pear, White and Black.

For demonstration of the install process of Fusion Acoustical Tuning Faceplates, scan the QR Code below.

Endless Acoustic and Creative Possibilities

By combining absorption and diffusion elements, this fusion approach provides a more comprehensive solution for creating an acoustically optimized environment, balancing the need for sound absorption to control reverberation with diffusion to maintain a lively and natural acoustic character. Higher frequencies are reflected or scattered, while midrange and lower frequencies are still absorbed.

Depending on your room's acoustical signature and purpose and the desired effect, you can add a Fusion panel to all your room's treatment panels or strategically place them.
